

VTF™ Vented Transition Flashing By MK Products LLC.

Ventilation for residential attics is an essential part of your business, whether designing a new home or an addition to an existing home. Spec'ing the best products for you customers can be a challenge. I would like to introduce a solution to an age old venting problem concerning porch roofs, shed roof additions, large boxed out window roofs. Essentially any roof line that terminates into a wall can now be properly exhaust vented and also appear esthetically pleasing.

If you have questions concerning proper application and usage please feel free to contact us any time at the contact information listed below.

Potential Problem Areas in Roof
Shed Roof (as addition)

Made from sturdy 6mm corrugated plastic, a fiber membrane screen and .19 aluminum cover.

VTF™ is available in two colors: Musket brown and Black.

Currently available at **Wimsatt Building Materials & ABC Supply Stores**
